The action grows out of an effort on the part of the State by relation and at the instance of an independent telephone company at Columbia, Tenn., to declare a forfeiture of the charter of the defendant company on the ground that it has violated the statutes in its attempts to suppress competition.

Later in the day Chancellor Allison amended his decree, stating that for astisfactory reasons he would decline to appoint a receiver.

### Moves Through Air at Will of Operator

Flying Machine Invented by San Francisco Man Proves a

Success.

AN FRANCISCO, May 2 .- Dr. August Greth, accompanied by an assistant, started today in his airship on a trip to San Jose, miles south of this city. The ascent was made from the grounds on Eleventh street, near Mar-

ket, where the aerial craft has been lo-

trict in Alaska. The resignation has been accepted, to take effect July 1st. No Intimation is given as to Griggsby's successor. More than a year ago Attorney-General Knox recommended that Griggsby be dismissed for disobedience of the orders of the department in leaving his post without permission. Subsequently charges were preferred against him, in which it was alleged that he received \$10.00 from the Ploneer Mining company of Nome, the allegation stating that the sum was to secure for the Ploneer Mining company immunity from United States prosecution. Griggsby admitted the receipt of the money, half of which was in cash and the other half in stock in the Ploneer Mining company, but said it was an attorney's fee. The case has been postponed until this time. cated for some time. After reaching an elevation of several hundred feet, Dr. Greth, the inventor, who acted as helmsman, caused the vessel to circle about and move in various directions, demonstrating that it was under his control. He then aded it south, almost directly against Mother Throws Baby the wind, and started on a bee-line for San Jose, at which city he hoped to

nake a landing.

The airship, obeying the force of its light motor, made good progress and

was soon out of sight.
Fair progress was made by the aero-cauta until the line between San Fransco and Mateo counties was reached, he airship obeyed its helm, and though its speed was not great, it responded quickly to the will of its inventor. While passing over the town of Colma one of the valves of the engine became clogged and refused to work. This ne-cessitated a descent, which was made without accident.

Although he did not reach his desti-nation. Dr. Greth considers that his voyage, which lasted over an hour, has demonstrated the success of his device for aerial navigation.
